of
Health and Wellbeing evidence

October 2018
This report provides health and wellbeing evidence from the Oxfordshire Joint Strategic Needs Assessment (JSNA) for Didcot. Reports and related information for the full Oxfordshire Joint Strategic Needs Assessment is available on the Oxfordshire Insight website at http://insight.oxfordshire.gov.uk/cms/joint-strategic-needs-assessment
1 Summary

- Between 2006 and 2016, the population of Didcot ward increased from **23,800** to **27,700**. This growth, over a ten-year period, was an increase of just under 4,000 people or **16%** and twice the rate of growth in the population of Oxfordshire (+8%).

- The change in age profile of the town shows the effect of both inward migration (an increase in age groups 0-9 and 25-34 years) and an ageing population (a 32% increase in the number of people aged 50+).

- At the time of the Census 2011 survey, Didcot had a higher proportion of ethnic minority residents than the district average, but well below the county and national averages (11% compared with 9% in South Oxfordshire, 16% in Oxfordshire and 20% in England).

- Census 2011 data on country of birth shows the largest groups of non-UK born residents were from:
  - Poland (410)
  - Germany (186)
  - India (185)
  - South Africa (137)

- According to the 2015 Indices of Deprivation, the majority of Didcot is relatively un-deprived with 12 of 17 areas ranked within the 50% least deprived nationally. Areas ranked as more deprived in Didcot are influenced by relatively poor rankings on the **Education and Skills** domain.

- According to the latest local measure of child poverty (HMRC, Aug 2014) there was a total of 655 children aged under 16 in low income families in Didcot. The rate of children in low income families varied from 17.7% in Didcot All Saints (above the county average) to 5.5% in Didcot Ladygrove.

- Children in South Oxfordshire district are less likely to appear in the social care, police and mental health data than Oxfordshire as a whole. The Didcot wards, however, have particularly high prevalence.
  - Children in Didcot South ward are 4 times more likely to be referred to social care; 5 times more likely to be in a household with a domestic abuse notification and over twice as likely to be a victim of crime than in the district as a whole.
  - Didcot West ward also has high rates of referrals to child social care and domestic abuse notifications involving children. This ward has particularly high rates of children as a victim of crime (6 times the district average).

- Public Health England local profiles show that, overall, people living in wards in Didcot are relatively healthy compared with the England average. Didcot West is statistically worse than average on several indicators: **Incidence of colorectal cancer, hospital stays for self-harm, death from all causes, death from circulatory disease, death from stroke.**

---

1 Data only available for old wards
Didcot South is statistically worse on one indicator: *Emergency admissions for hip fracture in 65+.*

- As of 1 August 2018, there were 6 care homes with 99 care home beds in Didcot.
- The prevalence of diabetes recorded by Didcot Health Centre Practice, Woodlands Medical Centre and Oak Tree Health Centre in Didcot remained at a similar level in 2016-17 compared with the previous year. The rates of diabetes in Didcot Health Centre and Woodlands were each above the Oxfordshire CCG average.
- The prevalence of dementia in 2016-17 recorded by GP practices in Didcot are each below the Oxfordshire CCG and England averages.
- Didcot Health Centre and Oak Tree Health Centre have rates of depression that were significantly higher than the Oxfordshire CCG and national rate in 2016-17. The rate of depression recorded by Oak Tree Health Centre was double the national average.
- Part of Didcot (the area covering the southern part of the town) had the lowest score for participation in sport in South Oxfordshire district (36.5% participated once a week, 2011-12).
- Over the past 5 years (year ending December 2012 to year ending December 2017), median prices for semi-detached housing in Didcot have increased at a similar rate to the South Oxfordshire average. The greatest increase was in Didcot South ward (+£92,500, +42%).
- In 2011, 85% of people living in Didcot and commuting to work were working in Oxfordshire. A small number (391, 3%) travelled to London to work.
2 Geographical area

Data in this profile is reported using several types of geographical boundaries – administrative and statistical.

The change to ward boundaries in 2015 reduced the number of wards covering Didcot from 4 to 3 and now include Didcot North East, Didcot West, and Didcot South.

**Didcot Wards (from 2015)**

**Didcot Wards old vs new wards**
In addition to these administrative boundaries, National Statistics for small areas are reported using the statistical hierarchy developed by the Office for National Statistics.

**Middle Super Output Areas (MSOAs)** are used by ONS to publish Census travel to work data and an increasing range of other social and demographic statistics.

There are 4 complete MSOAs covering Didcot: South Oxfordshire 09 / 010 / 013 and 014.

**Lower Super Output Areas (LSOAs)** are used as the geography for publishing the national Indices of Deprivation (IMD). Didcot is covered by a total of 17 LSOAs.
Each LSOA is made up of smaller Output Areas. The main dataset available at Output Area level is the Census 2011 and Census 2001 surveys.

A small number of datasets are available at postcode district level. Didcot is within the wider postcode district of OX11.

**Didcot Postcode sectors**
Schools

The schools in the Didcot Schools Partnership are in Didcot and the surrounding communities of Blewbury, Chilton, East Hagbourne, Harwell and South Moreton. Many of the pupils currently in the partnership primary schools will attend Didcot Girls School, St Birinus (Boys) or Aureus Secondary School when they reach year national curriculum year seven.

GP data

Data on prevalence of health conditions has been extracted from the Quality Outcomes Framework (to the end of March 2017) for the following 3 GP practices in Didcot:

- Didcot Health Centre Practice
- Woodland Medical Centre
- Oak Tree Health Centre
3 Population profile

According to the ONS mid-year ward population estimates, the population of Didcot Wards increased from 23,800 in mid-2006 to 27,700 in mid-2016. This growth, over a ten-year period, was an increase of almost 4,000 people or 17%, twice the rate of growth in the population of Oxfordshire (+8%).

The pyramid below shows the effects of both inward migration to the town (an increase in age groups 0-9 and 25-34 years) and an ageing population with a 32% increase in people aged 50+.

**Figure 1 Population of Didcot by 5-year age band 2006 and 2016**

Source: ONS ward level mid-year population estimates (2006 and 2016)
Comparing the age profile of Didcot in 2016 with the district, county, regional and national averages, shows a higher proportion in the younger age group (0-15) and a lower proportion of over 65s.

**Figure 2 Proportion of Didcot aged 0-15 and 65+ (2016)**

At the time of the Census 2011 survey, Didcot had a higher proportion of ethnic minority residents than the district average but well below the national average\(^2\) (11% compared with 9% in South Oxfordshire, 16% in Oxfordshire and 20% in England).

The largest ethnic minority background was “White Other” with 1,255 residents, followed by Asian/Asian British background (715).

Census 2011 data on country of birth shows the largest groups of non-UK born residents from:

- Poland (410)
- Germany (186)
- India (185)
- South Africa (137)

4 People living in Communal Establishments

At the time of the Census 2011 survey, there were 154 people living in Didcot counted as living in a communal establishment out of a total of 2,774 communal establishment residents in South Oxfordshire (6%).

Of the total of 154 people living in Didcot in a communal establishment in 2011:

- 81 were in a care home with nursing;
- 54 were in a Defence establishment;
- 7 were in an NHS hospital;
- 7 were in a hostel or temporary shelter for the homeless.

5 Deprivation and Children in poverty

Indices of Deprivation 2015

The 2015 Indices of Deprivation (IMD2015) combines measures across 7 “domains” and includes supplementary indices of deprivation affecting children and older people.

According to this latest IMD, the majority of Didcot is relatively un-deprived with 12 of 17 areas ranked within the 50% least deprived nationally.

Areas ranked as more deprived in Didcot are influenced by relatively poor rankings on the Education and Skills domain:

- One area of Didcot West ward (010A) is ranked in the 30% most deprived nationally. This area is also ranked within the 10% most deprived on Education and Skills.
- One area of Didcot South ward (013C) is ranked in the 40% most deprived nationally and is also within the 10% most deprived on Education and Skills.

Figure 4  IMD 2015, showing overall index

According to the latest local measure of child poverty (HMRC, Aug 2014) there was a total of 655 children aged under 16 in low income families in Didcot.

The rate of children in low income families varied from 17.7% in Didcot All Saints (above the county average) to 5.5% in Didcot Ladygrove (data only available for old wards).

**Figure 5  Child poverty* (snapshot August 2014, data by old wards)**

Number of children aged under 16 in low income families:

- Didcot: 655
- South Oxfordshire: 2,075

Source: HM Revenue & Customs released 30 Sept 2016; *Number of children aged under 16 living in families in receipt of Child Tax Credit whose reported income is less than 60 per cent of the median income or in receipt of Income Support or Income-Based Jobseekers Allowance.
7 Vulnerable children

Introduction

In 2017, work was commissioned by the Performance, Audit & Quality Assurance subgroup of the Safeguarding Board and Children’s Trust to provide an overview of contact with vulnerable children at a local geographical level across Oxfordshire.

Maps and charts are reported at ward level on the use of social care; health and police services to identify geographical hotspots and school attendance data is reported by school partnerships. The data on attendance is taken from the School Locality Profiles for 2015/16 academic year.

Findings for Didcot

Children in South Oxfordshire district are less likely to appear in the social care, police and mental health data than Oxfordshire as a whole.

However the Didcot wards have particularly high prevalence.

- Children in Didcot South are 4 times more likely to be referred to social care; 5 times more likely to be in a household with a domestic abuse notification and over twice as likely to be a victim of crime than in the district as a whole.

- Didcot West also has high rates of referrals to child social care and domestic abuse notifications involving children. This ward has particularly high rates of children as a victim of crime (6 times the district average).

3 The report for South Oxfordshire is available on the JSNA page of the Oxfordshire Insight website.

Source: Vulnerable Children mapping project, report on Oxfordshire Insight. Table shows data by ward in South Oxfordshire - the rate of social care referrals, domestic violence notifications, children as victims of crime and referrals to the CAMHS service. The wards are then ranked, with highest rates first against the other wards in the district (16) and then by the other wards in the county.
Persistent absence from school

In 2015/16, 560 pupils were classed as persistently absent from secondary schools in the Didcot, Wallingford and Henley locality and 534 pupils received a fixed term exclusion. The secondary school persistent absence rate for Didcot locality was the lowest of the 9 locality areas in Oxfordshire and below the national average.

Figure 6 Persistent absence rates - secondary schools (2015/16)

In 2015/16, 354 pupils were classed as persistently absent from primary schools in the Didcot, Wallingford and Henley locality and 66 pupils received a fixed term exclusion. The persistent absence rates for Didcot locality were the second lowest of the 9 localities in Oxfordshire and below the national average.

Figure 7 Persistent absence rates - primary schools (2015/16)
8 Health and wellbeing

8.1 Health profiles for Didcot

Public Health England publishes a range of health indicators to a local level at [www.localhealth.org.uk](http://www.localhealth.org.uk)

The following table lists, for each ward in Didcot, which health indicators are (statistically) significantly worse than the England average.

The health profile for Didcot varies across the wards. Didcot West scores significantly below the national average on several health indicators including deaths from stroke and hospital stays for self-harm. Didcot North East on the other hand has no indicators scoring significantly worse and several scoring significantly better.

Indicators of healthy lifestyles from the Didcot health profiles show:

- Healthy eating adults: Didcot is not significantly different to England average
- Teenage smokers: No data
- Binge Drinking adults: Didcot is not significantly different to England average
- Hospital stays for alcohol related harm: Didcot is not significantly different to the England average with the exception of Didcot North East which is slightly better than average.

8.2 Provision of care

Care home beds
As of 1 August 2018, there were 6 care homes with 99 care home beds in Didcot\(^4\), each of which were rated as “good”.

People providing unpaid care
At the time of the Census 2011 survey, there were 658 residents in Didcot providing a significant number of hours per week (20 or more) of unpaid care.

The proportion of people in Didcot providing unpaid care was similar to the South Oxfordshire average overall and below the national average. The proportion of unpaid carers (20 hours or more) in Didcot in the older age groups was higher than the district average.

Figure 11 People providing 20 hours or more per week of unpaid care by age as % of resident population for Didcot (2011)

8.3 Health conditions

**Diabetes**

The prevalence of *diabetes mellitus* recorded by Didcot Health Centre Practice, Woodlands Medical Centre and Oak Tree Health Centre in Didcot remained at a similar level in 2016-17 compared with the previous year.

The rates in Didcot Health Centre and Woodlands were above the Oxfordshire CCG average.

**Mental health**

The prevalence of *dementia* in 2016-17 recorded by Didcot Health Centre Practice and Oak Tree Health Centre has remained well below the Oxfordshire CCG average.

Dementia prevalence recorded by Woodland Medical Centre was similar to the Oxfordshire and national average.

8.4 Physical activity

According to Sport England’s small area estimates of sports participation (2011-12 once a week participation indicator), Didcot was within the high, middle-high and low-middle quartiles. The lowest sports participation was in the area covering the southern part of Didcot, with 36.5% participating in sport once a week, this is the lowest participation score for South Oxfordshire district.

Figure 15 Once a week sport participation (1x30), APS6 (2011/2012)

The sports participation indicator measures the percentage of people (age 16+) participating in at least 30 minutes of sport at moderate intensity at least once a week. This includes all recreational cycling. It does not include recreational walking but includes more intense/strenuous walking activities such as power walking, hill trekking, cliff walking and gorge walking. Please note this data was updated in October 2015.

Modelled estimates of participation are based on data from Sport England’s Active People Survey 6 (October 2011-October 2012).

MSOA participation estimates are based on modelled estimates of participation. Modelled estimates combine survey data from Active People with other data sources that are available at the area level (for example, health indicators, socioeconomic status etc.).

Middle Super Output areas (MSOA’s) are a geography for the collection and publication of small area statistics. MSOA’s have a minimum population of 5,000; and a mean population of 7,200.
9 Other - house prices and commuting data

Median house prices for small areas are very dependent on the mix of housing sold (detached, semi-detached, terraced, flats). Looking at individual housing types gives a more comparable trend.

Over the past 5 years (year ending December 2012 to year ending December 2017), median prices for semi-detached housing in Didcot have increased at a similar rate to the South Oxfordshire average. The greatest increase was in Didcot South ward (+£92,500, +42%).

Figure 16 Median price paid for semi-detached dwellings to year ending December 2017 – Didcot Wards.

Travelling to work

The travel to work data in this section is for the areas covered by Middle Layer Super Output Areas 009,010,013 and 014 (Didcot).

According to the 2011 Census travel to work statistics, there were 14,207 people living in Didcot (MSOA 009,010,013 and 014) in employment the week before the Census.

Of these, 5,050 were living and working in Didcot (including working from home and no fixed place of work) and 9,157 commuted to work outside the town.

Two thirds of Didcot commuters travelled to work in South Oxfordshire or Vale of White Horse and a further 12% travelled to Oxford for work. Overall 85% of Didcot commuters were working in Oxfordshire. A small number (391, 3%) travelled to London to work.
