Oxfordshire
Joint Strategic Needs Assessment
2019

SUMMARY OF FINDINGS

First published March 2019
v2 revised May 2019
Introduction to the Oxfordshire Joint Strategic Needs Assessment: Health and Wellbeing facts and figures

The Oxfordshire Joint Strategic Needs Assessment identifies the current and future health and wellbeing needs of our local population.

The annual JSNA report is provided to the Oxfordshire Health and Wellbeing Board and underpins the Health and Wellbeing strategy.

Other JSNA resources include:
- Public Health Dashboards
- Health Needs Assessments
- Community Health and Wellbeing Profiles
- JSNA Bitesize

This summary section is Chapter 1 of the 2019 update

This pack summarises the main findings from a strategic review of evidence about the health and wellbeing of Oxfordshire’s residents, based on research carried out between November 2018 and February 2019.

We would like to thank the very many contributors of data and commentary from organisations across Oxfordshire including:

- Oxfordshire County Council, Cherwell District Council, Oxford City Council, South Oxfordshire District Council, Vale of White Horse District Council, West Oxfordshire District Council, Oxfordshire Clinical Commissioning Group, Oxford Health NHS FT, Thames Valley Police, Citizen’s Advice Oxfordshire, Age UK Oxfordshire, Healthwatch Oxfordshire

Thanks also to members of the JSNA Steering Group for their oversight and guidance (Oxfordshire County Council, Oxfordshire Clinical Commissioning Group, West Oxfordshire District Council for districts, Healthwatch Oxfordshire)

JSNA 2019 authors:
- Philippa Dent, Public Health, Oxfordshire County Council
- Sue Lygo, Public Health, Oxfordshire County Council
- Margaret Melling, Research & Intelligence, Oxfordshire County Council

*Note this version includes corrections to three data points on slide 8, the “snake”: GCSE results (updated to latest year); babies breastfed at 6-8 weeks corrected; first time young offenders (originally included all ages); deaths from cancer – note added “3 years”; adults smoke (small revision)
Health and wellbeing in Oxfordshire - overall

Oxfordshire’s population is relatively healthy

- Oxfordshire does better or similar to the national average on most Public Health indicators.
- Healthy life expectancy in Oxfordshire is significantly higher than national and regional averages for both males and females.

Earnings of Oxfordshire residents are increasing and above average

House prices are continuing to increase and more people are renting privately

The future growth of the population (especially the numbers of young people) is very dependent on levels of house building in future and will vary across the county

Our population is ageing, a trend that is forecast to continue

Inequalities remain

- Household income varies significantly across the county
- Life expectancy is lower in more deprived areas

Cancer remains the leading cause of death in Oxfordshire and is the highest cause of preventable deaths in people aged under 75

Over half of adults in Oxfordshire are overweight or obese, and three in ten adults are not meeting physical activity guidelines

There has been an increase in A&E and unplanned admissions and a decline in planned admissions and outpatients

Mental health diagnosis and referrals are continuing to increase

Evidence is starting to emerge from the healthy new town programmes in Oxfordshire, showing people of all ages becoming more physically active and managing their health and wellbeing

Public Health indicators for Oxfordshire are available from Public Health England Local Authority Health Profiles
Health and wellbeing in Oxfordshire - young people

- There has been a slight increase in rates of child poverty in Oxfordshire.
- The ethnic diversity of Oxfordshire’s school population is increasing.
- Early years results (aged 5) for poorer pupils, for pupils with Special Educational Needs and for Asian pupils in Oxfordshire are each below average and have declined.
- The achievement of Oxfordshire’s disadvantaged children aged 10-11 has remained below the national average.
- Unauthorised absence from secondary schools has increased at a faster rate than nationally.
- There has been an increase in looked after children in Oxfordshire and in children placed outside the county.
- The % of Oxfordshire’s care leavers in employment, education or training remains below the national average.
- Referrals to Oxford Health for mental health services in Oxfordshire in younger age groups have continued to increase.
- The pressure on Child and Adolescent Mental Health Services in Oxfordshire has increased.
- Self-harm admissions are increasing in young people (aged 10-24 years) in Oxfordshire and are above the national average.
- Alcohol-specific admissions in under 18s in Oxfordshire were higher than national and regional averages.
- Similar to previous years, excess weight in children in Oxfordshire has remained high. One in five children in Reception, and one in three children in Year 6 was overweight or obese.
- Children’s participation in sport and physical activity is declining nationally, and most children in Oxfordshire are not meeting the daily physical activity guidelines.

Public Health indicators for children are available from Public Health England Child Health Profiles.
Health and wellbeing in Oxfordshire - older people

- Oxfordshire’s population is ageing, with substantial recent and predicted growth in the number of people aged 85 and over.
- Dementia and Alzheimer’s disease are increasing as leading cause of death in people over 75.
- Falls are the largest cause of emergency hospital admissions for older people (65+); Oxford City has a rate consistently significantly worse than England.
- There has been an increase in reablement (from a low base) and in the number of adults provided with long-term social care.
- There has been an increase in the proportion of older social care clients supported at home.
- Social care users in Oxfordshire less likely to feel socially isolated and more likely to believe their home meets their needs than average.
- Older social care users worry most about falling over.
- Almost two thirds of older people are estimated to be self-funding long term care in Oxfordshire.
- Potential increase in demand for social care services by 2031, similar whether or not housing growth is included.
- Wide areas of rural Oxfordshire are ranked poorly on geographical access to services according to the geographical access to services subdomain of the 2015 Indices of Multiple Deprivation.
- Use of the internet by older people is increasing, however a significant number of older or disabled people have never used the internet.

Public Health indicators for older people are available from Public Health England Older People’s Health and Wellbeing.
Rural areas have an older age profile than urban areas

Median age

- 46 - 49
- 44 - 45
- 41 - 43
- 35 - 40
- 24 - 34

Child obesity rates are higher in Oxford and Banbury

Year 6 children who are measured as obese

- 19.3% - 31.7%
- 16.9% - 19.2%
- 14.6% - 16.8%
- 11.6% - 14.5%
- 7.0% - 11.5%

Physical activity rates are higher in more affluent areas

People aged 16+ who are physically active

- 70.6% - 79.7%
- 69.2% - 70.5%
- 67.5% - 69.1%
- 64.1% - 67.4%
- 53.2% - 64.0%

Rural and southern Oxfordshire are more affluent than other areas

Net annual household income estimate after housing costs

- £37,100.01 - £49,200.00
- £35,200.01 - £37,100.00
- £33,100.01 - £35,200.00
- £30,900.01 - £33,100.00
- £23,100.00 - £30,900.00

SUMMARY SLIDES FROM INDIVIDUAL JSNA CHAPTERS
Chapter 2: Population SUMMARY

Oxfordshire’s population is estimated at 682,400 (mid-2017) and the county is the most rural in the South East region.

The majority (60%) of Oxfordshire's residents are concentrated in Oxford City and the county's main towns, with almost 40% of people living in smaller towns and villages.

Oxfordshire’s past population growth has been driven by natural change (as births outnumber deaths) and international migration.

Pupil data indicates that Oxfordshire’s ethnic minority population has increased since the last national census in 2011:

- As of January 2018, just over a quarter (26%) of primary school pupils were from an ethnic minority background, up from 19% in 2011
- Around 1 in 5 (22%) of secondary school pupils were from an ethnic minority background up from 15% in 2011

Including Oxfordshire’s planned housing growth in population forecasts results in a significant increase in the working age and younger populations.

Oxfordshire’s population is ageing (with or without housing growth). The population aged 85+ is expected to increase by 63% (+10,900) by 2032.

Life Expectancy (LE) is continuing to increase and male LE is catching up with female LE.

There are clear inequalities across Oxfordshire, with people in the more deprived areas having significantly lower Life Expectancy compared with the less deprived.

The gap in Life Expectancy between more deprived and less deprived areas in Oxfordshire appears to have increased.

Healthy life expectancy in Oxfordshire is significantly higher than national and regional averages for both males and females.

Chapter 4: Wider determinants of health SUMMARY (1)

Work, income and deprivation

- **Earnings** growth for Oxfordshire residents continues to outpace the South East region.
- **Household income** varies significantly across Oxfordshire.
- Oxfordshire’s economic activity rate remains above the England average and the unemployment rate remains low.
- The number of people from overseas registering for a National Insurance number in Oxfordshire has declined.
- There has been a slight increase in rates of **child poverty** in Oxfordshire.
- The number of households in **fuel poverty** has declined.
- Healthy eating is less affordable for low income families and there has been a rise in the use of emergency food provision such as food banks.

Housing and homelessness

- The cheapest market **housing** is over 10 times the lower earnings in each district in Oxfordshire.
- Tenure estimates suggest that 26% of private dwellings in Oxfordshire were **privately rented** in 2017, up from 22% in 2012.
- The cost of renting **privately** in Oxfordshire remains well above the South East and national averages.
- Isolation and loneliness have been found to be a significant health risk and a cause of increased use of health services. Areas with the highest risk of loneliness are in Cherwell (Banbury, Bicester Town); Oxford (Blackbird Leys, Wood Farm, Barton, St Clements, Jericho, Cowley) and South Oxfordshire (Didcot South).
- There has been a fall in the number of people in **temporary accommodation**.
- The number of **people sleeping rough** has continued to rise.
Chapter 4: Wider determinants of health SUMMARY (2)

Education and qualifications

- Early years (aged 5) results for boys has improved. Early years results for free school meals pupils, for pupils with SEN and for Asian pupils in Oxfordshire are each below average. The gap between these disadvantaged pupils and other pupils has got wider.
- The % of pupils aged 5 achieving a good level of development in Early Learning Goals in Oxford city has improved each year since 2014.
- For children aged 10-11, achievement of Oxfordshire’s disadvantaged children has remained below national average.
- Pupils attaining “strong” passes in GCSE English and Maths was above average in Oxfordshire, below average in Cherwell.
- Unauthorised absence from secondary schools has increased at a faster rate than nationally.
- Fewer people in Oxfordshire have no qualifications (2017 compared with 2010).

Physical and social environment

- Active Travel through cycling and walking is increasing but there has been no change in people walking or cycling at least once a week.
- There is strong evidence linking the density of fast food outlets to the level of area deprivation.
- Conditions exacerbated by air pollution include asthma, chronic bronchitis, chronic heart disease (CHD), and stroke.
- Health impacts of climate change will mainly be felt through changes in temperature, disease and pollution.
- Evaluation evidence is starting to emerge from the healthy new town programmes in Bicester and Barton, highlighting strong partnership working and people actively managing their health.
Chapter 5: Causes of death and health conditions SUMMARY

- Cancer remains the leading cause of death in Oxfordshire.
- Depression diagnosis among adults is increasing. The rate of social, emotional and mental health needs of school pupils in Oxfordshire is increasing and remains above the national average.
- Dementia and Alzheimer’s disease are increasing as leading cause of death in people over 75.
- Emergency hospital admissions for self-harm for all ages have decreased, but are increasing in young people (aged 10-24 years) in Oxfordshire and now significantly higher than England.
- Over half of deaths in those under 75 were considered preventable, and the highest cause of preventable death in those under 75 was cancer.
- The rate of deaths by suicide remains similar to national and regional rates.
- Falls are the largest cause of emergency hospital admissions for older people (65+); the rate of admissions due to falls in Oxford City has remained above the national average.
- The Public Health England local health profile for Oxfordshire shows that, for the majority of indicators, Oxfordshire fairs well compared with the national average.
- Cardiovascular, cancer, depression and osteoporosis have higher prevalence in Oxfordshire GP-recorded data than national average.
- Oxfordshire estimated to have 430 blind or partially sighted children and young people.
- Cancer incidence rate is similar to national average.
- Over 40% of people 50+ years have hearing loss, rising to 71% in people 70+ years.
Public Health profile (from chapter 5)

The Public Health England local health profile for Oxfordshire shows that, for the majority of indicators, Oxfordshire fairs well compared to national average.

Indicators that are worse than average are killed and serious injured on roads, hospital stays for self harm, diabetes diagnosis and alcohol-specific hospital stays in young people.

Source: Local Authority Health Profiles, PHE
Chapter 6: Lifestyles SUMMARY

Smoking prevalence in Oxfordshire is lower than the England average and is decreasing, but prevalence remains high for adults in routine and manual occupation groups.

Alcohol-related hospital admissions in Oxfordshire adults were significantly lower than in England overall for males in all age groups, and females over age 40. Admissions for females under 40 were similar to England overall. Alcohol-specific admissions in under 18s were higher than national and regional averages.

The rate of deaths from drug misuse remains below the national and regional averages.

Over half of adults in Oxfordshire are overweight or obese, and three in ten adults are not meeting physical activity guidelines.

Similar to previous years, excess weight in children has remained high. One in five children in Reception, and one in three children in Year 6 was overweight or obese.

Children’s participation in sport and physical activity is declining nationally, and most children in Oxfordshire are not meeting the daily physical activity guidelines.

The percentage of babies with low birth weight in Oxfordshire remains lower than national levels, and breastfeeding prevalence stays high in the county, well above national levels.

Dental decay in 5 year olds is decreasing in the county, but one in five children is still affected.

New diagnoses of sexually transmitted infections have continued to decrease in Oxfordshire, and the rate is now similar to the South East average.

The rate of teenage conceptions in Oxfordshire is significantly lower than the national average and is decreasing broadly in line with national and regional trends.
Chapter 7: Service use SUMMARY (1)

Primary health care
- Oxfordshire has a higher GP to patient ratio than the national average and a lower ratio for nurses and admin staff
- The difference between the number of registered GP patients and the estimated population has increased and could affect comparisons of health outcomes
- A higher proportion of GP appointments were carried out by telephone in Oxfordshire than average

Secondary health care
- NHS job vacancies have increased in Oxfordshire
- There has been an increase in A&E and unplanned admissions and a decline in planned admissions and outpatients
- Outpatient (first attendances) rate per population has increased in the older age group
- Delayed transfers of care (out of hospital) in Oxfordshire has continued to fall

Mental health services
- Continued increase in referrals to Oxford Health for mental health services in Oxfordshire in younger age groups
- The pressure on Child and Adolescent Mental Health Services in Oxfordshire has increased

Children’s social care
- Referrals to Children’s social care in Oxfordshire have declined
- The number of children on child protection plans in Oxfordshire has increased and data shows rates above average. The most recent data held by Oxfordshire County Council (not published) shows the number has fallen.
- Increase in looked after children and in children placed outside Oxfordshire
- The % of Oxfordshire’s care leavers in employment, education or training remains below the national average
- The rate of Troubled Families in Oxfordshire was highest in Oxford City and Cherwell
- Potential increase in demand for children’s social care services by 2031, depends on level of housing growth
Chapter 7: Service use SUMMARY (2)

**Adult social care**
- Increase in reablement (from a low base) and in number of adults provided with long-term social care
- Increase in the proportion of older social care clients supported at home
- Social care users in Oxfordshire less likely to feel socially isolated and more likely to believe their home meets their needs than average
- Older social care users worry most about falling over
- Almost two thirds of older people estimated to be self-funding long term care in Oxfordshire
- Potential increase in demand for social similar whether or not housing growth is included

**Community safety services**
- Domestic abuse crimes and incidents in Oxfordshire has remained at a similar level to the previous year. There have been increases in younger and older victims of domestic abuse and male victims
- Police have recorded a significant increase in the number of victims of rape, especially in Oxford City. There have been increases in victims of Child Sexual Exploitation and Modern Slavery in Oxfordshire.
- The number of victims of doorstep crime or rogue traders in Oxfordshire has declined again

**Health support and preventing ill-health**
- Slight decline in number of adults in specialist drug treatment
- Since the introduction of Universal Credit, Citizens Advice Oxfordshire has seen a significant increase in clients seeking advice
- Mental health and wellbeing accounted for 20% of interventions by School Health Nurses and 14% of interventions by the College Nurse Service in Oxfordshire.

**Access to services**
- Wide areas of rural Oxfordshire are ranked poorly on geographical access to services according to the geographical access to services subdomain of the 2015 Indices of Multiple Deprivation
- Use of the internet by older people is increasing, however a significant number of older or disabled people have never used the internet
